Govindarajula Adarsh

+91 7075943279| Linkedin.com/in/gsnadarsh24 | gsnadarsh24@gmail.com

SKILLS

Languages: Java, JavaScript, SQL, Python, Ruby
Full Stack: Spring Boot, Ruby on Rails, RESTful APIs, API Integration, Node.js, React.js, Redux
Databases & Tools: PostgreSQL, MongoDB, Git, Maven, Docker, Linux

EXPERIENCE

Zaggle Prepaid Ocean Services — Hyderabad, India
Software Engineer — June 2025 – Sep 2026

Cumulative Spend–Based QR Payment Blocking
- Capped payout risk for ~1,700 users with a real-time control that auto-blocks QR payments at a client's daily spend limit.
- Enabled bulk limit setup across clients via a REST API with validation, per-client errors and a full audit trail.
- Designed a frequency-driven schema that lets weekly and monthly limits be added without data-model changes.

Card-Loading Status Reporting Scheduler
- Replaced manual script checks with a Rails scheduler reporting card-loading status for all provider banks every 6 hours.
- Delivered tabular reports by email to internal recipients managed via site configuration, with ~80 reports sent to date.
- Gave the team early visibility into stuck and failed card loads without running scripts for each bank.

Petty Cash Performance Metrics Dashboard
- Replaced repetitive ad-hoc SQL data requests by building a full-stack metrics dashboard for the Petty Cash team.
- Gave leadership date-range views of active tenants, onboarded users, payment volume and success rate in one screen.
- Ensured trustworthy figures by excluding internal test accounts from all production metrics.

Expense Backfill Utility
- Designed and implemented a backend utility API to backfill missing expenseId values for DEBIT transactions, ensuring consistent expense linkage across financial systems.

Store Bulk Upload
- Implemented bulk store creation and update via Excel (.xlsx) upload, enabling downstream budget allocation and petty cash operations.
- Built idempotent, category-agnostic processing logic with single DB read/write guarantees, improving reliability of transaction reconciliation.
- Implemented bulk store creation and updates via Excel (.xlsx) uploads, enabling scalable budget allocation and petty cash operations.

Software Engineering Intern — Jan 2025 – June 2025

Production Escalation – OTP / Payments Outage (P0)
- Resolved a P0 production incident that halted QR payments by identifying OTP failures caused by SMS template ID mismatches in backend configuration.
- Restored authentication flows by correcting vendor (Kaleyra) template mappings and redeploying affected services.

Payment Recovery & In-Progress Transaction Fix
- Investigated pending QR payment states and implemented backend recovery logic to reconcile transactions while preserving audit logs and financial integrity.
- Prevented duplicate or inconsistent settlements by validating payment states across dependent services.

Web vs Mobile Usage Analysis
- Analyzed API request logs in Oodle to compare web and mobile usage across the same functions.
- Partnered with the Oodle team to build a cross-functional dashboard displaying web and mobile metrics.
- Revealed that most users are on mobile, guiding the team's platform prioritization.

LTIMindtree — Hyderabad, India
Software Engineering Intern — Oct - Dec 2023
- Developed a Computer Vision project using OpenCV to enhance graphical data interpretation accuracy.
- Engineered algorithms for precise graph labeling using edge detection and contour recognition.
- Integrated FastAPI, improving code efficiency by 20% and achieving 90% accuracy in contour area calculations.

PROJECTS & RESEARCH

Ensemble Learning of Transformer Models for Enhanced Sentiment Analysis, *CBIT Hyderabad* — April - July 2025
- Developed and fine-tuned an ensemble sentiment analysis pipeline using BERT, RoBERTa, XLNet, DistilBERT, and ELECTRA.
- Implemented emoji de-emojization, advanced tokenization, regularization, and AdamW optimization to improve generalization on Sentiment140 and IMDB datasets.
- Applied majority voting ensemble strategy, achieving superior accuracy and robust performance across accuracy, precision, recall, F1-score, and confusion matrix evaluations.

EDUCATION

Chaitanya Bharathi Institute of Technology (Osmania University), Hyderabad, India — 2021 - 2025
B.E. in Computer Science, A.I & M.L Specialization, **CGPA: 8.5/10**

Narayana Junior College, Hyderabad, India — 2018-2020
Intermediate, Grade 11 & 12 (MPC), Top 1% of batch, **Aggr.: 97%**

FIITJEE World School, Hyderabad, India — 2018
SSC, Grade X, Top of the class, **Aggr.: 95%**

CERTIFICATIONS

The Complete Web Development Bootcamp, App Brewery/Udemy — Ongoing
Covers HTML, CSS, JavaScript, React, Node.js, REST APIs, databases and deployment.

LLM Engineering: Master AI and Large Language Models, Udemy — Ongoing
Covers generative AI applications, RAG, agents, Hugging Face, LangChain and QLoRA fine-tuning.
